Subject: AW: URGENT: Finalising the Agenda for InfraRoom at Toronto

Dear Jim, dear Henk,

With the work in the P6 Alignment project coming to a successful end soon, I would be happy if you could address the establishment of follow-on projects in Toronto. From my point of view, this would include dedicated IfcRoad and IfcBridge projects, which would be based on the Alignment schema we have developed and which would aim at integrating all previous work which has been done in this area around the globe (US, France, Germany, Norway Korea, etc) to form the core of the IFC5 Infrastructure parts. We at TUM would be happy to participate in any of the follow-on projects. The main hurdle will be to organize the required funding.

Best regards,
André

Betreff: URGENT: Finalising the Agenda for InfraRoom at Toronto

Colleagues,

Henk Schaap & I invited you all to provide (maximum) 1-page documents that could form the basis and background for discussions at Toronto (see full text below). We have only a very small handful of responses, so far.

We are finalising the draft agenda this week for ratification at the Steering Committee meeting early next week, so need your responses in the next couple of days.

If you wish to raise an issue for discussion or let us all know about current activity in the infrastructure standards space, then please take this opportunity. We want to establish a clear and unified direction for on-going cooperative work in this space!

Thanks, Jim & Henk

Text of Henk's earlier email:

Dear InfraRoom member,

InfraCom are determined to make effective use of the limited time available at our Toronto Meeting. We are conscious of the need to energise our activities as we move forward to ensure that progress in the development of infrastructure standards is better managed, more effective and makes better use of the global resources available to
